Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1  #include<stdio.h>
2  int count=0;
3  void reverse(int n){
4      int rev=0,remainder;
5      count++;
6      while(n!=0){
7          count++;
8          remainder=n%10;
9          count++;
10         rev=rev*10+remainder;
11         count++;
12         n/=10;
13         count++;
14     }
15     count++;
16     //printf(rev);
17     count++;
18     printf("%d",count);
19 }
20 int main(){
21     int n;
22     scanf("%d",&n);
23     reverse(n);
24     return 0;
25 }
```

	Input	Expected	Got	
✔	12	11	11	✔
✔	1234	19	19	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
